## **Installation Instruction for AF383AC**

# Mounting Dimension Pull-rod No provide) Reference of the pull-rod of the pu

#### Specification

Model	AF383AC	
Product	Electronic Faucet	
Material of Casing	Chrome-plated brass casting	
Power Apply	AC110V~AC220V 50/60 Hz	
Power consumption	5W below	
Infrared Sensor Range	Adjusted automatically 5cm∼ 15 cm	
Protection	Automatic flow stop after 1 minute in case	
	of a continuous abnormal flow	
Delay Time	0.5 - 1.0 seconds	
Applicable Water Pressure	10-100 PSI	
Flowing Volume	3.8L/min below	
Applicable Water Temperature	39°F~150°F (4°C ~ 65°C)	
Ceramic Bore Diameter	28Φ~ 45Φ (single-hole basin or deck)	

#### Operation

Keep hands under faucet for sensor detection.

 Hand approaches upside sensor(for 1 second) for sensor detection.

2.Starts solenoid valve and 3.Stop flor flows immediately. after h

2.Starts solenoid valve and 3.Stop flowing when hand flows immediately. approaches upside sensor again.

Caution

**3** 

3.Stop flowing in 1 second

Clean filter regularly to avoid flow volume decline.(about 3-6 months depend on water quality condition)

always clean to prevent dirt and dust.

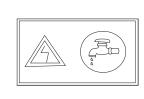

1. In order to avoid sensor failure, keep infrared window

2. Do not spray water or wash casing by strong acid,

Wipe dirt or stain by wet soft cloth if necessary.

which may cause short- circuit or corrosion on casing.

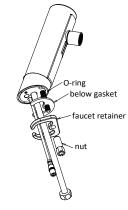

# Installation Steps

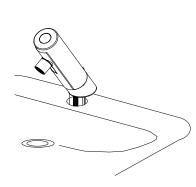

· Clean miscellaneous article inside of water

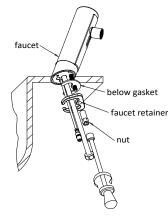

- pipe to avoid obstruction and faucet failure.
- Affirm specification of electric power and faucet model to avoid inflammation.

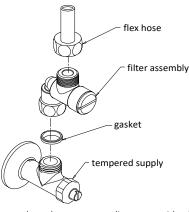

(1) Remove nut, faucet retainer and below gasket. (keep O-ring)

(2) Secure faucet and O-ring on the upside of lavatory or deck's hole.

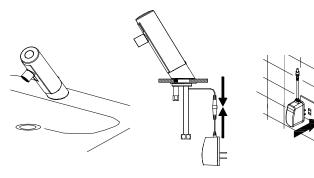

(3) Firmly secure faucet by tools on lavatory or deck.

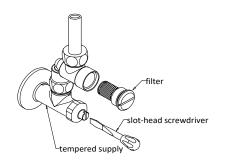

- (4) Turn on tempered supply to spout out dirty water with miscellaneous article.
- 1. Firmly secure filter assembly by tools above tempered supply.
- 2. Fasten flex hose onto outlet of filter assembly.

※Remind to secure filter assembly to avoid faucet's abnormal activation.

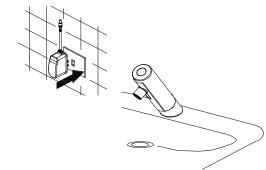

- (5) 1. Make sure there are not any objects in the sensing area, including the sink and counter.
- 2. plug in the AC/DC adapter, Step out of the sensing range for a minimum of 3 seconds, after which the setting will be completed.
- 3. Turn on tempered supply and adjust to proper flow.

#### Cleaning Filter and Adjusting Water Flow

- Bad water quality resulted filter obstruction and flow decline. Turn off tempered supply by a slot-head screwdriver and take filter out for cleaning.
- 2. Adjust flow volume by a slot-head screwdriver.

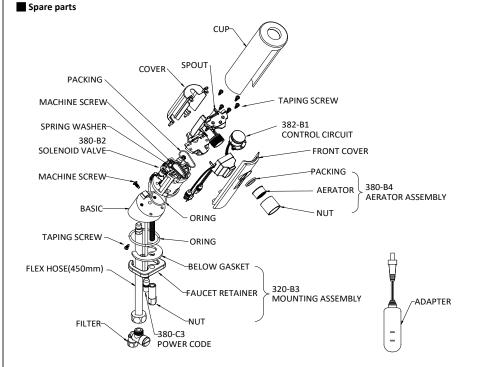

#### Sensor Range Adjustment (automatically adjusted and set)

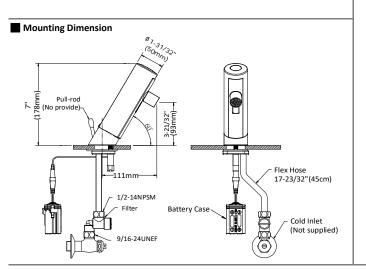

- 1. Make sure there are not any objects in the sensing area.
- Unplug the AC adapter and leave it unplugged for at least
   minute
- Plug back in the AC adapter. Step out of the sensing range for a minimum of 3 seconds, after which the setting will be completed.

#### Troubleshooting

Situation	Possible Cause	Solution
No function LED flockes	1 Dinty Concer Window	Wipe clean Infrared window with tissue
No function, LED flashes	1. Dirty Sensor Window	paper
No function (No LED light when sensing)		1. Check power connection. Make sure it's
	1. Loose power connection	properly connected
	2. AC/DC adapter failure	2. Replace AC/DC adapter
	3. Circuitry failure	3. Replace circuitry
No function (LED flashes once)	1. Water supply is turned off	1. Check water supply
		2. Check solenoid valve connection, reconnect
	2. Loose solenoid valve connection	if loose
	3. Solenoid valve failure	3. Replace solenoid valve
	4. Circuitry failure	4. Replace circuitry
Water keeps running	1. Dirty Sensor Window	Wipe clean sensor window with tissue
		paper
	2. Sensing range is set too long	2. Re-set sensing range
	3. Solenoid valve failure	3. Replace solenoid valve
Weak water flow	4 Wash water swank	1. Turn tempered supply to increase water
	1. Weak water supply	volume
	2. Filtered obstructed	2. Clean filter
	3. Aerator obstructed	3. Clean aerator
Water flows when not in use	1. Dirty sensor window	Wipe clean sensor window with tissue
	1. Dirty selisor willidow	paper
	2. Sensing range is set too long	2. Re-set sensing range

## Installation Instruction for AF383DC

#### Specification

Model	AF383DC
Product	Electronic Faucet
Material of casing	chrome-plated brass casting
Power Apply	Size AA Alkaline battery x 4pcs
Power Consumption	3W below
Infrared Sensor Range	Adjusted automatically 5cm∼ 15 cm
Protection	Automatic flow stop after 1 minute in case of
	a continuous abnormal flow
Delay Time	0.5 - 1.0 seconds
Applicable water pressure	10-100 PSI
Flowing volume	3.8L/min below
Applicable water temperature	39°F~150°F (4°C ~ 65°C)
Ceramic Bore Diameter	28Φ~ 45Φ (single-hole basin or deck)

#### Operation

1. Keep hands under faucet for sensor detection.

1. Hand approaches upside sensor(for 1 second) for sensor detection

2.Starts solenoid valve and flows immediately

flows immediately.

3.Stop flowing when hand 2.Starts solenoid valve and approaches upside sensor again.

tempered supply

flex hose

3.Stop flowing in 1 second

after hands quit.

# Caution

3

Wipe dirt or stain by wet soft cloth if necessary.

1. In order to avoid sensor failure, keep infrared window

3. Clean filter regularly to avoid flow volume decline. (about 3-6 months depend on water quality condition)

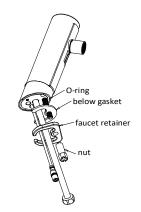

4. The faucet applied for alkaline battrey, replace new battery when LED flashes at the upside window indicator.

# Installation Steps

## **※**Check electric power and water source

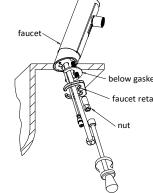

- · Clean miscellaneous article inside of water pipe to avoid obstruction and faucet failure.
- · Affirm specification of electric power and faucet model to avoid inflammation.

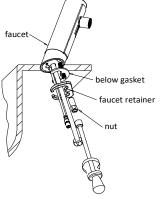

(1) Remove nut, faucet retainer and below gasket. (keep O-ring)

(2) Secure faucet and O-ring on the upside of lavatory or deck's hole.

(3) Firmly secure faucet by tools on lavatory or deck.

(4) Turn on tempered supply to spout out dirty water with miscellaneous article.

1. Firmly secure filter assembly by tools above tempered supply.

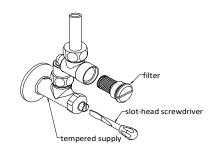

\*Remind to secure filter assembly to avoid faucet's abnormal activation.

2. Fasten flex hose onto outlet of filter assembly.

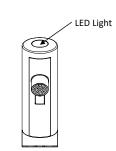

- (5) Remove casing and battery box in accordance with above charts. 1. Install battery DC1.5V AA x 4 accordingly.
- 2. Make sure there are not any objects in the sensing area.
- 3. Connect battery box connector as illustrated. step out of the sensing range for at least 3 seconds, to after which the setting will be completed.
- 4. Turn on tempered supply and adjust to proper flow.

# Clean filter and flow adjustment

- 1. Bad water quality resulted filter obstruction and flow decline. Turn off tempered supply by a slot-head screwdriver and take filter out replaced immediately. for cleaning.
- 2. Adjust proper flow by a slot-head screwdriver.

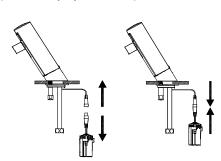

# Replacing Battery

When the LED is flashing red, it is an indication of low battery and need to be

**※** Only Alkaline AA batteries should be used for this product.

#### Sensor Range Adjustment (automatically adjusted and set)

- 1. Make sure there are not any objects in the sensing area.
- 2. Unplug the battery box connector and leave it unplugged for
- 3. Connect battery box connector as illustrated. step out of the sensing range for at least 3 seconds, to after which the setting

# **■** Troubleshooting

Situation	Possible Cause	Solution
No function	1 Dirty Consor Window	1. Wipe Infrared window clean
No function, LED flashes	1. Dirty Sensor Window	with tissue paper
	2. Low(dead) battery	2. Replace battery
	1. Dirty Sensor Window	1. Wipe Clean Sensor Window
No function	2. Loose power connection	2. Check power connection.
( No LED light	2. Loose power connection	Make sure it's properly
when sensing)	3. Low battery	3. Replace battery
	4. Circuitry failure	4. Replace circuitry
	1.Water supply is turned off	1.Check water supply
No function	2.Loose solenoid valve	2. Check solenoid valve
( LED flashes	connection	connection, reconnect if loose
once)	3. Solenoid valve failure	3. Replace solenoid valve
	4. Circuitry failure	4. Replace circuitry
Water keeps	1. Dirty Sensor Window	1. Wipe clean sensor window
	1. Dirty Selisor Willdow	with tissue paper
running	2. Sensing range is set too long	2. Re-set sensing range
	3. Solenoid valve failure	3. Replace solenoid valve
	1. Weak water supply	1. Turn tempered supply to
Weak water		increase water volume
